PC-Check Topology
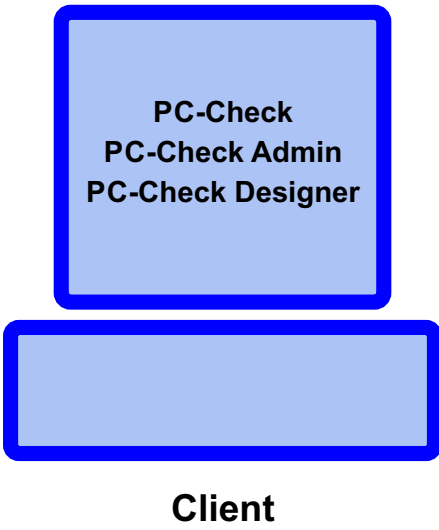

Standalone installation

► All 3 functions on one computer (Client, Admin and Designer)

PC-Check
PC-Check Admin
PC-Check Designer

Client

PC-Check
▪ User performs checks

PC-Check Admin
▪ Admin analyzes the performed checks

PC-Check Designer
▪ Admin creates/modifies the checks

Network speedtest
The network speed test determines the internal network speed by performing several copy operations. In the standalone installation, only copy operations within one computer can be performed. The determined values are thus higher than the actual network speed.

Network installation

► Please perform steps 1 - 3

receives .cfg files

writes .cfg files

Share ConfigShare
e.g. \\MyServer\ConfigShare$

Designer client with PC-Check-Designer.exe
...creates configurations

Speedtest read/write

Share Speedtest
e.g. \\MyServer\Speedtest$

Client with PC-Check.exe
...performs checks
...performs speedtests

writes the results

reads the results

Share ResultShare
e.g. \\MyServer\ResultShare$

Admin client with PC-Check-Admin.exe
...analyzes checks
